

1. Write a lambda function to return the sum of two numbers.
2. Write a lambda function to check if a number is even.
3. Write a lambda function to return the square of a number.
4. Write a lambda function that returns the cube of a number.
5. Write a lambda function that converts Celsius to Fahrenheit.
6. Write a lambda function that returns the maximum of two numbers.
7. Write a lambda function that returns "positive" if a number > 0 if num==0 then "ZERO" else "negative".
8. Write a lambda function to calculate area of a circle.
9. Write a lambda function that returns the length of a string.
10. Write a lambda function that converts a string to uppercase.
11. Write a lambda function that checks if a string includes "JS".
12. Write a lambda function that reverses a string using string methods.
13. Write a lambda function that returns the first element of an array.
14. Write a lambda function that returns the last element of an array.
15. Write a lambda function that joins array elements with commas.
16. Write a lambda function that checks if an array includes the number 5.
17. Write a lambda function that returns the total number of characters in a string.
18. Write a lambda function that returns true if an array is empty.
19. Write a lambda function that checks if a year is a leap year.
20. Write a lambda function that rounds a decimal to two places.
21. Write a lambda function that returns the absolute value of a number.
22. Write a lambda function that checks if two strings are equal by length and by letters.
23. Write a lambda function that takes a string and parse it into float and upto two decimal places.
24. Write a lambda function that takes a string and parse into integer.
25. Count number of words from a string
26. Reverse the string word wise.
27. Count vowels in a string
28. Remove duplicate characters.
29. Find the first repeating character
30. Find the longest word in a sentence without using split().
31. Remove all spaces without using replace()
32. Extract all digits from a string and form a new string.
33. Check if a string contains only alphabets (A–Z, a–z).
34. Find all substrings of length K that contain no repeating characters.
35. Extract all substrings manually
36. Extract all substrings that end with a vowel.
37. Extract all substrings of even length.
38. Extract the largest substring that contains all unique characters of the string.
39. Count the frequency of string in sentence.

40. Longest word in sentence and longest word length.
41. Missing number from 1-n.
42. Missing number from any range.
43. Find the minimum-length substring containing all distinct characters of the string.
44. Check Palindrome Substring Count
45. Majority Element (Moore's Voting Algorithm) frequency greater than $n/2$
46. Second Largest Element Without Sorting
47. Move All Zeroes to End (In-Place)
48. Count Frequency of Each numeric Element [1,5,5,2,5,3,8,9,1,5]
49. Find Pair With Given Sum take target from user and array list. [1,5,7,8,2]
target sum =10 pair is (8,2)
50. Move all zeroes and 1 and two make it sort [1,1,1,1,2,2,0,0,0,0,2,2,1,1,1]
(without sorting method)
51. Make all zeroes appear at the end of list [1,2,0,0,0,3,0,0,0,4]
->[1,2,3,4,0,0,0,0,0,0]
52. Maximum Number of Vowels in Substring of Size K.
53. Remove Duplicates From Sorted Array
54. Longest Subarray With Equal 0s and 1s
55. Valid Parentheses from Stack
56. Next Greater Element
57. Nearest Smaller Element to Lnd Peak Element [1 2 eft
58. Fi3 6 5 4]
59. Square Root of a Number using Binary Search
60. Fibonacci Using Recursion
61. Pallindrome and reverse of number.
62. Merge two arrays (using spread operator) (using DSA approach)
63. Take 2 sorted array merge and output should be sorted
64. First Non-Repeating Character in a String
Input: a a b c c b d
Output after each step : a -1 b b b -1 d
65. First non-repeating word in a sentence.
